SWITCHMODE SERIES
NPN SILICON POWER TRANSISTORS

The 2N6544 and 2N6545 transistors are designed for high-voltage ,high-speed,power switching inductive circuits where fall time is critical.they are particularly, suited for 115 and 220 volt line operated switch-mode applications such as:

* Switching Regulators
* PWM inverters and Motor Controls
* Solenoid and Relay Drivers
* Deflection Circuits

Specification Features-

High Temperature Performance Specified for: Reversed Biased SOA with inductive loads Switching Times with inductive Loads Saturation Voltages, Leakage Currents.

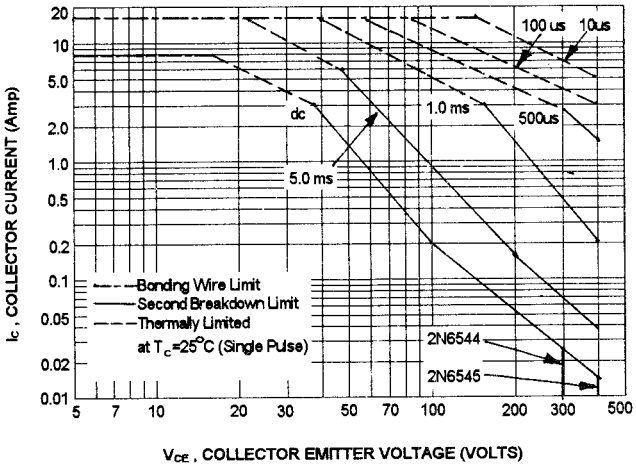
ACTIVE-REGION SAFE OPERATING AREA (SOA)



There are two limitation on the power handling ability of a transistor:average junction temperature and second breakdown safe operating area curves indicate I_C-V_{CE} limits of the transistor that must be observed for reliable operation i.e., the transistor must not be subjected to greater dissipation than curves indicate.

The data of SOA curve is base on $T_{J(PK)}$=200 °C;T_C is variable depending on conditions. second breakdown pulse limits are valid for duty cycles to 10% provided $T_{J(PK)}$≤200°C,At high case temperatures, thermal limitation will reduce the power that can be handled to values less than the limitations imposed by second breakdown.
